

Command Anti-Malware (CSAM)

Command Anti-Malware (CSAM) offers world-class protection at an affordable price. We've designed CSAM to be lean and easy to use. So you get award winning protection that won't slow you down or break your budget. In short, CSAM protects you and your bottom line.

Award-Winning Protection

Our industry-leading anti-malware engine provides an unprecedented level of protection against all forms of viruses, trojans, adware, spyware and other malicious agents. Our detection capabilities have won awards from leading certification authorities, including VB 100, West Coast Labs and ICSA. Our multiple advanced-heuristics provide "zero-hour" detection, which means that you are protected against malware well in advance of a general outbreak.

Small Footprint and Seamless Updates

CSAM has one of the smallest footprints (18 MB) in the industry. In addition, we use incremental updates that can run in the background without interrupting current use of the computer. Of course, you can also schedule updates as frequently as you like and at times that are most convenient to you.

"Set and Forget" Simplicity

Individual users will find our client interface intuitive and easy to use. Network administrators will find the simplicity of our central management console a welcome change of pace. Once set up, our solution runs seamlessly without needless interruptions or cryptic messages.

Small Business and Enterprise Solutions

CSAM comes in a small business solution, which is ideal for the user who does not need central management. Our enterprise solution can be deployed to hundreds of endpoints. Both solutions combine best-of-breed protection with ease of use and affordability.

What this means to you:

- Award-winning protection against all forms of malware
- Behavior-based analytics
- Stops potential threats before they materialize
- On-access scanning immobilizes suspicious files and applications before they start
- On-demand scanning scours and disinfects all resident files and applications
- Fast, incremental updates won't slow you down or interrupt your work
- Small download minimizes use of processor and memory resources
- Simplified interface empowers all levels of user
- Ease of use minimizes training and help desk incidents
- Full compatibility with multiple vendor products eliminates system lock-ups
- Friendly telephone and email support

Key Features

Award Winning Detection

- VB100, West Coast Labs and ICSA awards for superior detection
- Small footprint (just 18 MB of memory)
- Next generation technology provides full malware detection against viruses, trojans, spyware, adware, PUAs (potentially unwanted applications), rootkits and other malicious agents
- Multiple data-driven heuristics proactively protect against new threats
- Advanced emulation proactively protects against variants and unidentified malware
- USB infection detection blocks malware from external devices

Fast Updates

- Incremental updates are small and load quickly without interrupting work
- Update intervals are fully configurable from user interface

- Update intervals fully configurable from centralized management console*
- Standard updates made available at least daily

Malware Disinfection

- Advanced malware removal capability
- Registry and memory cleaning without reboot

Choice of Installation Methods

- Central installation via Galileo*
- Managed installation via active directory and other tools supporting MSI methodology

Multiple Scan Capabilities

- Scan runs in background without interrupting work
- Memory scan on program startup
- On-access scan each time a file or folder is opened
- On-demand scan for files and folder by right click or via user interface
- Choice of scanning entire disks or selected folders and files
- Scheduled scan

- Command-line scanner
- Remote scan*
- Integrated real-time email scan*

Simplified User Interface

- Choice of "basic" or "advanced" user profiles
- Intuitive user interface is easy to use
- Scanning and updates can be scheduled or dynamically started from user interface
- Log viewer provides easy access to scan results
- Real-time support and help accessible from desktop interface
- Threat matrix virus resource accessible from user interface
- Centralized management based on Microsoft Management Console*

* Enterprise (Galileo) only

System Requirements

Windows Operating Systems (minimum)

- 2000 (SP4, rollup 1)
- XP (SP2)
- Vista
- Windows 7
- Windows 2003 (SP1)
- Windows 2008

Other Operating Systems

- Red Hat Linux
- FreeBSD v6 and later
- Solaris Sparc v8 and later
