Commtouch Enterprise Anti-Spam Gateway

An instantly deployed enterprise-grade solution designed for any type of network, Commtouch's Enterprise Anti-Spam Gateway protects over 50 million mailboxes worldwide from spam and malware. This powerful solution delivers all of the features corporate networks need: real-time blocking, best accuracy/detection in the industry—including for image-based spam—coupled with powerful IT-management and an intuitive user interface.

REAL-TIME

"Commtouch's RPD approach detects and blocks spam in the first few minutes of an outbreak, unlike other anti-spam approaches." IDC

Given the phenomenal distribution rates of today's spam and malware, real-time protection is a must. A vulnerability gap of just 10 minutes can significantly reduce performance. The Commtouch solution achieves consistently superior performance thanks to its unique ability to detect spam and malware outbreaks as soon as they emerge, and to block all associated messages in real time.

Lifecycle of a Typical Outbreak

Distribution sources	10,000+
Average attack volume	+100M messages
Average distribution duration	2-3 hours
Result of 10 minute lag in detection	vast amounts of missed spam and malware

ENTERPRISE-GRADE

Designed for under half-hour deployment in any email platform, the Commtouch Enterprise Anti-Spam Gateway has been implemented by over a thousand enterprises across the globe. It delivers all the advantages network managers need most: full automation with zero maintenance, flexible deployment, and powerful end-user capabilities with no user installation.

ACCURATE

Since upgrading to Commtouch Enterprise Anti-Spam, we forgot what image-based spam is.

Stephen Laughlin, Academy of Television Arts & Sciences

Commtouch's RPD technology is very good at recognizing legitimate emails, so we are confident that we are receiving all of our business related email.

Gareth Wright, ITV plc

Many vendors are trying to fight spam, Commtouch is winning.

Frank Gullotti, Emptoris

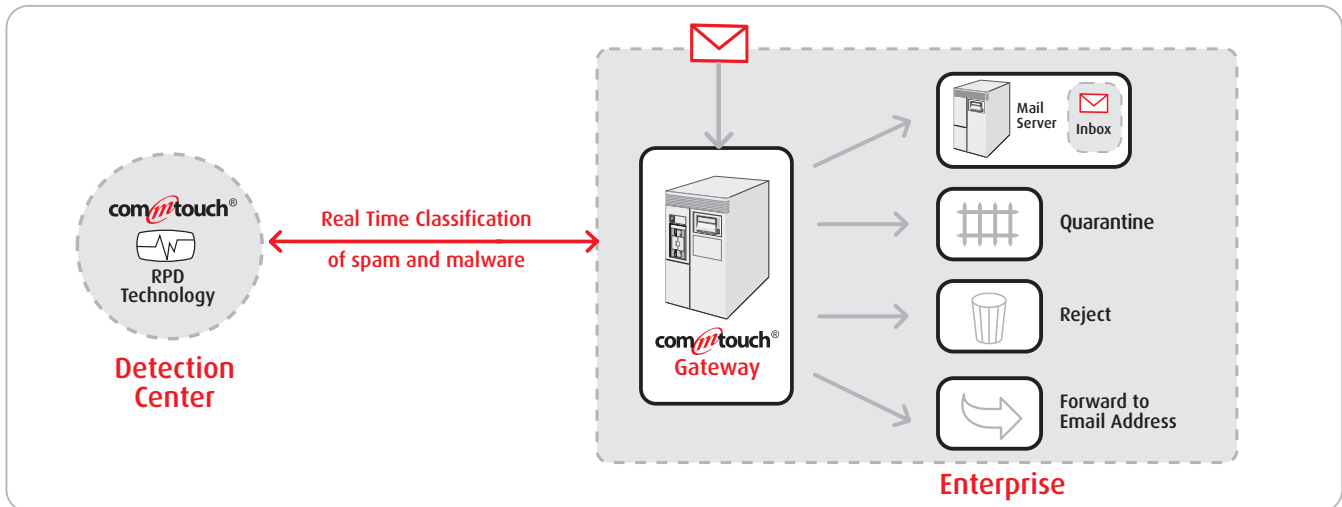

ADVANCED EMAIL DEFENSE

Today's viruses, worms and Trojans target the primary weakness in anti-virus technology: the time it takes for new signatures or heuristics to be developed and distributed. Commtouch Anti-Spam now incorporates new Zero-Hour™ Virus Outbreak Protection to shield enterprises in the earliest moments of malware outbreaks, and right through as new variants emerge.

Commtouch Enterprise Anti-Spam Gateway

How it Works

The Commtouch Enterprise Anti-Spam Gateway consists of two elements: a software gateway installed inside the corporation, and the Commtouch Real-Time Detection Center based on RPD technology.

Recurrent Pattern Detection™ (RPD) Patented Technology

Spam and dangerous malware are evolving at a frantic pace. Spam is continuously modified to stay far ahead of anti-spam filters. Malware is distributed with thousands of simultaneous variants, which are impossible for traditional anti-virus engines to catch. To avoid these pitfalls, RPD entirely circumvents analysis of individual messages. Rather, it detects and blocks outbreaks based on their rapid and massive distribution.

The RPD approach overcomes one of the most pressing issues in the industry: response time to new threats. RPD detects outbreaks as soon as they emerge, with no need to analyze each message. Thanks to its content agnostic nature, RPD is effective against spam and malware in any language or format, including image-based spam.

Commtouch Enterprise Anti-Spam Gateway

The Enterprise Gateway 5.0 communicates with the Remote Detection Center in real-time, obtaining up-to-the-second information on spam and malware outbreaks. The Gateway offers flexible management and an intuitive user interface. Compatible with any email platform, it is quickly deployed in any enterprise network, with single or multiple entry points.

Diverse deployments including:

- Top US and European universities
- Fortune 500 healthcare organizations
- Governmental installations of +10,000 seats
- First grade finance & legal firms
- Technology vendors, aviation industry and more

Enterprise-level feature-set includes:

- Scalable deployment scenarios
- Quick installation and configuration, no maintenance necessary
- Supports multiple LDAP servers
- Processes >1.7 million messages/day on a single Gateway
- Real-time reporting engine

Easy and intuitive user-interface:

- Supports any email client
- User-level and site-level quarantine and policies
- Optional web-based interface
- Scheduled notifications about quarantined messages
- Optional plug-in for MS-Outlook®
